Ticmint — Complete Digital Audit

Oct 20, 2026 · Daniel Deepak

Executive summary

Ticmint's digital health scores **4.8 / 10**: the product proof is enterprise-grade, but the marketing system around it is leaky, under-measured and still partly telling the 2023 blockchain story. The upside is large because most fixes are fast and the hard part — marquee clients and real volume — already exists.

Audit scores (out of 10) from public checks of ticmint.com, sitemaps, ad libraries, social profiles and review sites, 20 Oct 2026

Top 5 findings

1. **Conversion leaks on the homepage:** "Watch Demo" links to `#`; case-study cards are mislabelled and mis-linked; no attributed testimonials.
2. **Positioning drift:** the site sells 2%-fee white-label ticketing; YouTube and launch press still sell NFT/blockchain anti-scalping.
3. **Review gap:** Capterra 0 reviews and G2 7, against Ticket Tailor's 596 on Capterra.
4. **SEO built for volume, not buyers:** 110+ posts, ~22 on DTCM with near-duplicates, NFT listicles, 13+ draft/backup pages in the sitemap, and no comparison pages.
5. **Paid is paused:** about 10 Meta ad sets and 3 Google ads ran Mar–Aug 2026, but nothing of Ticmint's own is live today; duplicate GTM tags also make attribution unreliable.

Top 5 opportunities

1. One-week site clean-up: demo video, case-study fixes, noindex junk pages, single GTM.
2. Bottom-funnel SEO: Eventbrite/Ticket Tailor/Platinumlist/BookMyShow alternative pages and a ticketing fee calculator.
3. A 60-day review drive to 50 reviews — also lifts visibility in AI answer engines.
4. Scale the competitor-conquest pattern across Google, Meta retargeting and LinkedIn ABM for federations and festivals.
5. Build the three JD agents on clean data: paid-media optimiser, SEO content agent, and lead-intelligence agent logging to Freshsales.

Method and limits: public checks only (website, sitemaps, robots.txt, Google Ads Transparency Centre, Meta Ad Library, social profiles, G2, Capterra, press). Semrush traffic/backlink data and LinkedIn page stats were not available today; no access to GA4, GSC or Freshsales.

1. Company snapshot

Ticmint is a three-year-old white-label ticketing SaaS that has pivoted from blockchain anti-scalping (2023) to a low-fee, self-serve + enterprise ticketing platform (2026). That pivot is the single most important context for every growth decision.

Item	What we found
Founded / launched	UAE launch Sept–Oct 2023 (Gulf News, The Ticketing Business)
Founders	Omar Sarieddine and Abdulla Hisham. Hisham previously founded Foradian Technologies (Fedena school ERP, 10M+ users, 100+ countries)
Advisor	Darren Hepworth — ex-FIFA Qatar 2022 ticketing, ex-VP Ticketmaster Middle East
Original thesis (2023)	Blockchain/NFT tickets to fight fraud and scalping; Ticbolt plug-in for other ticketing providers
Current thesis (2026)	"Event Ticketing Platform. Built for Every Organiser." White-label pages, data ownership, fees from 2% (homepage)
Offices (per JD)	India, US, UK, UAE — remote-first

Item	What we found
Claimed traction	820K+ fans served, 1,600+ events, $41M+ transactions, 138 countries
Marquee clients	Badminton Association of India (Yonex-Sunrise India Open), Basketball Federation of India, The Times Group, TEDx, CaribTix, Peak Longevity Fest Dubai, Afroloud
Trust signals	ISO 27001, SOC 2, press in Khaleej Times, Gulf News, Indian Express, India Today, Entrepreneur UK
Products	White Label Ticketing, Event Marketing Platform (email/WhatsApp, automations, affiliates), DTCM Permit Portal (Dubai), Enterprise (API, managed infra)
Pricing	Free (fee on paid tickets), Pro $19/mo or $180/yr; regional ₹249/mo, AED 59/mo, £19/mo; Enterprise custom (Capterra)
Growth stack (per JD)	WordPress + Elementor, GA4, Meta/Google/LinkedIn Ads, Freshsales, Canva, n8n/Claude Code

Ideal customer profiles (inferred from the site's Industries menu): sports federations and leagues, festivals and concerts, communities, venues, college events, marathons, conferences. The two clearly proven segments are **Indian sports federations** and **Dubai/UAE events** (DTCM permits).

Main competitors: Eventbrite, Ticket Tailor, Universe, Billetto, Tixr, See Tickets in global self-serve; BookMyShow, District (Zomato), Townscript, KonfHub, Allevents in India; Platinumlist and Virgin Megastore Tickets in the UAE.

2. Website & conversion audit

The site has strong raw material — real numbers, marquee logos, ISO/SOC 2 badges — but it leaks conversions through broken links, mislabelled proof and an unclear pricing story. Most fixes are one-day Elementor jobs, which makes this the fastest win for a new Growth Lead.

Score: 6/10.

What works

- Clear hero: "Event Ticketing Platform. Built for Every Organiser." with a free self-serve CTA ("Start Creating Free") and an enterprise CTA ("Book an Enterprise Demo").
- Hard proof numbers above the fold: 820K+ fans, 1,600+ events, $41M+ processed, 138 countries.
- Strong logo wall and press bar (Khaleej Times, Gulf News, India Today, Indian Express, Entrepreneur UK).
- A sharp price wedge: 2% fee vs Eventbrite's 3.5–8%+.
- Regional pricing (₹249, AED 59, £19) shows localisation intent.
- Live chat and a call-back form on the homepage; a referral programme ("Refer and Earn up to $3000") in the top banner.

Issues found (by severity)

#	Issue	Where	Impact	Fix
1	"Watch Demo" button links to `#` — goes nowhere	Homepage hero	High: the secondary CTA for undecided visitors is dead	Embed a 90-sec product walkthrough (Loom/YouTube) in a modal
2	Case study cards mislabelled: Caribtix and Yonex both tagged "Badminton · New Delhi"; Basketball Federation card links to a TEDx Emirates Hills URL	Homepage case studies	High: proof looks careless to enterprise buyers	Audit every card's tag and link
3	Zero attributed testimonials on homepage; Capterra has 0 reviews	Site-wide	High: B2B buyers want peer voices	Add 3 quotes with name, title, logo from BAI, BFI, CaribTix

#	Issue	Where	Impact	Fix
4	Fee claims contradict: "8–15%" in one place, "5–8%+" in another, Eventbrite "3.5–8%+" in FAQ; "$13,500 saved on $100K" doesn't compute (15% − 2% = $13,000)	Homepage	Medium: undermines the core price wedge	One fee calculator with sourced competitor numbers
5	Pricing page: Starter and Growth share the subtitle "Perfect for testing the waters"; "Most Popular" on Growth and "Recommended" on Enterprise	/pricing	Medium: no clear path to the paid plan	Rewrite plan subtitles by persona; one badge
6	Free plan fee is 5% — the "2%" headline only applies on Growth ($15–19/mo)	Homepage vs /pricing	Medium: perceived bait-and-switch	Say "2% on Growth" in the hero, or show a fee calculator
7	No currency switcher on pricing despite ₹/AED/£ prices elsewhere	/pricing	Medium: Indian/UAE visitors see USD only	Geo-IP currency or a toggle
8	"Coming Soon" features (Meta CAPI, advanced automation) listed with no dates	/pricing	Low–medium	Move to a public roadmap page
9	Mobile menu's Permit Portal link goes to /contact; desktop goes to the permit subdomain	Navigation	Medium: DTCM is a top SEO topic	Fix mobile menu link
10	`/case-study` and `/case-studies` both used	Navigation	Low: split URLs, possible 404s/duplicates	301 one to the other

#	Issue	Where	Impact	Fix
11	"Popular Searches" keyword block in footer (with a typo, "evnet")	Footer	Medium: reads as keyword stuffing; a spam-signal risk	Remove; replace with real internal links
12	Duplicate Google Tag Manager references	Site template	Medium: double-fired tags inflate GA4 data	Consolidate to one GTM container; check in Tag Assistant
13	Two "Get Growth" buttons point to different sign-in URLs	/pricing	Low: breaks funnel attribution	Single URL with UTM/plan param
14	No office addresses in footer (JD says India, US, UK, UAE)	Footer	Low: local trust and local SEO	Add offices + LocalBusiness schema

Conversion paths

Two funnels share one homepage: **self-serve** (Start Free → sign-up → create event) and **enterprise** (Book a Demo → sales). The homepage serves enterprise proof (federations, ISO) to self-serve users and ₹249 pricing to enterprise users. Recommended: keep the homepage for self-serve and move enterprise to a dedicated `/enterprise` funnel with its own ads, proof and demo form — and route each to a separate Freshsales pipeline.

Source: ticmint.com, pricing, reviewed 20 Oct 2026.

3. SEO audit

Ticmint is publishing a lot (110+ posts, ~one every two days) but chasing volume over intent: the content leans on DTCM permits and NFT listicles, cannibalises itself, and has no bottom-funnel comparison pages. The site also carries a lot of draft and backup page debris that should not be indexed.

Score: 5/10.

Technical SEO

Check	Finding	Status
Platform	WordPress (Yoast-style sitemap index with 9 child sitemaps)	OK
robots.txt	Standard WP rules; lists `news-sitemap.xml`, `sitemap.xml`, `sitemap.rss` on the non-www host while the site serves on www	Fix host mismatch
Meta title / description (home)	"Ticmint | Event Ticketing Platform for Music, Sports & Events" + fee/free messaging	Good
Junk pages in sitemap	`/new-home/`, `/new-home-2/`, `/new-ticmint/`, `/event-ticketing-platform-old/`, `/pricing-2025/`, `/contact-c/`, `/about-us-1/`, `/terms-3/`, `/terms-of-service-bak2/`, `/privacy-policy-bak-2/`, `/not-found-2/`, `/template-industry/`, `/thankyou/`	Critical: noindex or 301
Duplicate URL patterns	`/case-study/` vs `/case-studies/`; `/terms/` vs `/terms-3/`; `/refund/` vs `/refund-policy/`	Consolidate
Malformed slug	`/https-ticmint-com-freshers-event-marketing-guide/`	301 to clean slug
Tag sitemaps	Two `post_tag` sitemaps — thin tag archives are being indexed	Noindex tags
Regional pricing pages	`/pricing-in/`, `/pricing-ae/`, `/pricing-uk/` exist	Add hreflang (en-IN, en-AE, en-GB, en-US)
Footer keyword block	"Popular Searches" list with typo	Remove (spam signal)
Duplicate GTM	Two tag references	Fix (also distorts Core Web Vitals)

Check	Finding	Status
Bulk lastmod	Dozens of posts re-stamped within minutes on 13 Oct 2026; 2024/2025-dated slugs carry 2026 lastmod	Only update dates on real edits

Content audit

The post sitemap shows these clusters (110+ URLs):

Cluster	Approx. posts	Buyer intent	Verdict
DTCM / Dubai event permits	~22	Medium (organisers in UAE)	Strong niche moat, but 3+ near-identical "event permit Dubai guide 2026" posts cannibalise each other — merge into one pillar
White-label ticketing (UK/US/UAE/India variants)	~10	High	Keep; build a hub and add proof
NFT / blockchain ticketing	~10	Low (legacy positioning)	Prune or consolidate; off-message for 2026
"Best ticketing software [country]" listicles	many	High	Good intent, but year-stamped titles ("in 2027") look like AI spam
Event news (Coldplay Ahmedabad, "events in India Nov 2024")	several	None	Prune or noindex
Sports ticketing	several	High	Double down — proven ICP

Title patterns such as "10 Powerful Ways…", "Ultimate Guide…" and future-year stamps signal templated AI content. No posts carry a named author (only a site-level meta author "Ajinkya"), which weakens E-E-A-T for a B2B buyer.

Keyword gaps (missing bottom-funnel pages)

- **Comparison pages:** "Eventbrite alternative", "Ticmint vs Eventbrite", "Ticket Tailor alternative", "BookMyShow for organisers alternative", "Platinumlist alternative" — none exist.
- **Calculator pages:** a "ticketing fee calculator" (they already have a DTCM fees calculator — reuse the pattern).
- **Industry × city pages:** "marathon registration platform India", "sports ticketing software UAE", "conference ticketing UK".
- **Feature pages:** WhatsApp ticketing, access-control app, affiliate/referral ticket sales, seat maps.
- **Case-study SEO:** Yonex-Sunrise India Open and BFI case studies should target "badminton tournament ticketing" and "basketball league ticketing".

Authority and off-page

Press coverage (Gulf News, Khaleej Times, Indian Express, India Today, The Ticketing Business) is a link asset most competitors at this size lack. G2 lists 7 reviews (5.0); Capterra lists 0. Getting Capterra/G2 to 30+ reviews gives both review-site traffic and AI-answer visibility.

Data note: Semrush traffic, keyword and backlink figures could not be pulled — the connected Semrush account has run out of API units.

Sources: robots.txt, sitemap index, post sitemap, page sitemap, blog, G2.

4. Social media audit

Ticmint's social footprint is small for a company claiming 820K fans and $41M processed, and two channels still tell the 2023 blockchain story. Social is currently a logbook of past events, not a demand engine aimed at organisers.

Score: 4/10.

Channel	Audience (20 Oct 2026)	Activity	What's wrong	Priority fix
Instagram @ticmint	3,391 followers, 568 following, verified	Mostly Reels	Bio is good ("Event ticketing for all sizes. Sell tickets under your own brand. UK | USA | UAE | India"), but content speaks to attendees, not organisers	Organiser-focused Reels: "how X sold out in 48 hrs", fee math, product demos
YouTube @Ticmint	2.02K subscribers, 102 videos	Last upload ~3 months ago; recent tutorials got 48, 16 and 244 views	Channel description still says "blockchain-powered NFT ticketing platform" — contradicts the 2026 site	Rewrite description; feed the dead "Watch Demo" button from here; Shorts of each feature
X @ticmint	641 followers, 417 posts, joined Apr 2023, verified	Latest post 12 Oct (India Open throwback)	Header banner still shows India Open **2025**	Low priority for B2B; refresh banner, then use for press and event-day amplification only
LinkedIn (company page)	Not visible without login	—	Could not verify follower count or cadence; the JD names LinkedIn as the main channel	Not verified. Likely: founder-led posting by Abdulla Hisham is the biggest lever
Facebook	Ran ~10 Meta ad sets Mar–Aug 2026; none live now	—	Used as an ads identity; paid activity paused since 11 Aug 2026	Keep as an ads identity only

Key observations

- **Positioning drift:** YouTube (NFT/blockchain) and the site (2% white-label ticketing) describe two different companies. A buyer who searches the brand sees both.
- **Wrong audience:** event posts mostly reach ticket buyers. Ticmint's customer is the organiser; the organiser wants proof of revenue, sell-through and data ownership.
- **Under-used proof:** BAI's 27% revenue lift and 500K+ new users at Yonex-Sunrise India Open, and BFI's 66,500 tickets across 42 matches, are LinkedIn-ready case stories that barely appear on social.
- **Founder and employee advocacy** is the cheapest B2B reach available. A weekly founder post plus team reshares typically out-reaches a company page by several times.
- **White-label sub-brands** (e.g. payasuwish.ticmint.com) run their own Meta ads. Every client event page is a free distribution surface for a "Powered by Ticmint" badge and referral link.

5. Paid advertising audit

Ticmint ran a real paid push from March to August 2026 (about 10 Meta ad sets including retargeting, plus 3 Google ads with a smart Platinumlist conquest), but none of its own ads are live today. There is room to restart and build a full paid engine — exactly the "Performance Marketing Agent" the JD describes.

Score: 4/10.

Platform	What ran, and when	Assessment
Google Ads (Transparency Centre)	3 ads from verified advertiser **Ticmint Event Tickets Selling LLC** (UAE): UK search ad "Event Ticketing Platform UK – Fully Branded Ticket Pages" and white-label search ad "Platinumlist keeps your attendee data. Ticmint gives it back" (both last shown 23 Jun 2026); video ad "Launch Branded Ticketing Experiences" (last shown 12 Jul 2026)	Good landing URLs and a sharp competitor-conquest message. But nothing live for 3–4 months; no India or US variants; no Eventbrite conquest

Platform	What ran, and when	Assessment
Meta Ads (Ad Library)	About 10 ad sets from the "ticmint" page, 5 Mar–11 Aug 2026, across Facebook, Instagram, Messenger, Threads: UGC talking-head videos, "Who really owns your event?" comparison, "Stop renting your audience" static, an Onam seasonal ad ("from 2% with no setup cost"), and a retargeting ad ("You checked out Ticmint. You didn't finish signing up.")	Solid creative testing and retargeting already set up. All inactive now; one message ("own your audience") across every ad; no proof or case-study ads; aimed at UK and UAE, not India. Only live ad today is a client's (payasuwish.ticmint.com)
LinkedIn Ads	Not verifiable from outside (LinkedIn's ad library needs login)	Not verified; highest-intent B2B channel for enterprise demos

What a paid engine should look like

1. **Google Search** — three campaign groups per region (IN, AE, UK, US): brand; category ("white label ticketing", "event ticketing platform", "sports ticketing software"); competitor conquest (Eventbrite, Ticket Tailor, Platinumlist, BookMyShow, KonfHub).
2. **Meta** — retargeting of /pricing and sign-up abandoners; lookalikes from Freshsales organiser lists; lead ads for the Dubai Organiser Starter Kit and DTCM fees calculator.
3. **LinkedIn** — enterprise demo campaigns aimed at sports federations, festival promoters, venue managers and conference organisers; Document ads with the BAI and BFI case studies.
4. **Tracking** — fix duplicate GTM first; ship Meta CAPI (already "Coming Soon" on the pricing page); offline-conversion upload from Freshsales so bids optimise on SQLs, not form fills.

6. Reputation, reviews & PR

PR is Ticmint's strongest digital asset; third-party reviews are its weakest. Big-name sports deals got real media coverage, but software buyers comparing tools on Capterra see an empty profile next to competitors with hundreds of reviews.

Score: 5/10.

Source	Status	Comment
G2	7 reviews, 5.0/5	Small sample; buyers discount perfect scores
Capterra (+ GetApp, Software Advice network)	0 reviews	Listed beside Ticket Tailor (4.9, 596 reviews) and Purplepass (4.9, 304). Listing still quotes old pricing (Free with 5% fee, Pro $19/mo)
Press — launch	Gulf News, The Ticketing Business (Oct 2023)	Framed as a blockchain anti-scalping startup — now off-message
Press — sports deals	SportsMint Media, Sportskhabri, Impact (Dec 2024)	BAI named Ticmint official ticketing partner for India Open 2025 (BWF Super 750). Strong credibility in Indian sport
Trust badges	ISO 27001, SOC 2 on site	Rare at this size — should lead enterprise pages and LinkedIn ads
Client reviews on the site	None attributed	Biggest gap on the homepage

Fix: a 60-day review drive. Email every organiser with 2+ events, offer a small incentive within G2/Capterra rules, and target 50 reviews across both sites. This also improves visibility in AI answer engines (ChatGPT, Perplexity, Google AI Overviews), which lean heavily on review sites for "best ticketing platform" queries.

7. Competitor benchmark

Ticmint's real fight is not with Eventbrite on reach; it is with Ticket Tailor on fees and with regional players (Platinumlist, BookMyShow/District) on local trust. Its edge is the bundle: white-label + WhatsApp/email marketing + affiliates + enterprise grade (ISO/SOC 2) + DTCM know-how.

Platform	Model	Fees to organiser	Owns attendee data?	Review proof	Where Ticmint wins
Ticmint	White-label SaaS, self-serve + enterprise	5% free plan; 2% on Growth ($15–19/mo); custom enterprise	Yes	G2 7, Capterra 0	—
Eventbrite	Marketplace	3.7% + $1.79 per ticket + 2.9% processing	Shared with marketplace	Very high	Lower fees, own branding, data ownership
Ticket Tailor	White-label, flat fee	60p/ticket PAYG, from 22p prepaid; processor fees extra	Yes	Capterra 4.9 (596)	Built-in WhatsApp/email marketing, affiliates, enterprise compliance, India/UAE presence
Platinumlist (UAE)	Marketplace + ticketing	Commission (approximate; not public)	Marketplace keeps it	Strong local brand	Ticmint's Google ad already attacks this: "Platinumlist keeps your attendee data"
BookMyShow / District (India)	Consumer marketplace	High commission (approximate; not public)	Marketplace keeps it	Huge consumer brand	Data ownership, lower fees for federations and communities
KonfHub / Townscript (India)	Event-specific SaaS	Low % fee (approximate)	Yes	Moderate	Sports and large-venue scale (BAI, BFI)

Competitor fee numbers for Eventbrite and Ticket Tailor are from the linked 2026 comparison; others are approximate.

Messaging gap

Ticmint's homepage argues "2% vs 5–8%". Against Ticket Tailor, a flat 22–60p per ticket beats 2% on any ticket above roughly £11–£30, so the fee story breaks in the UK. The stronger, defensible story is **"Your brand, your audience, your revenue — plus the marketing tools to sell out."**

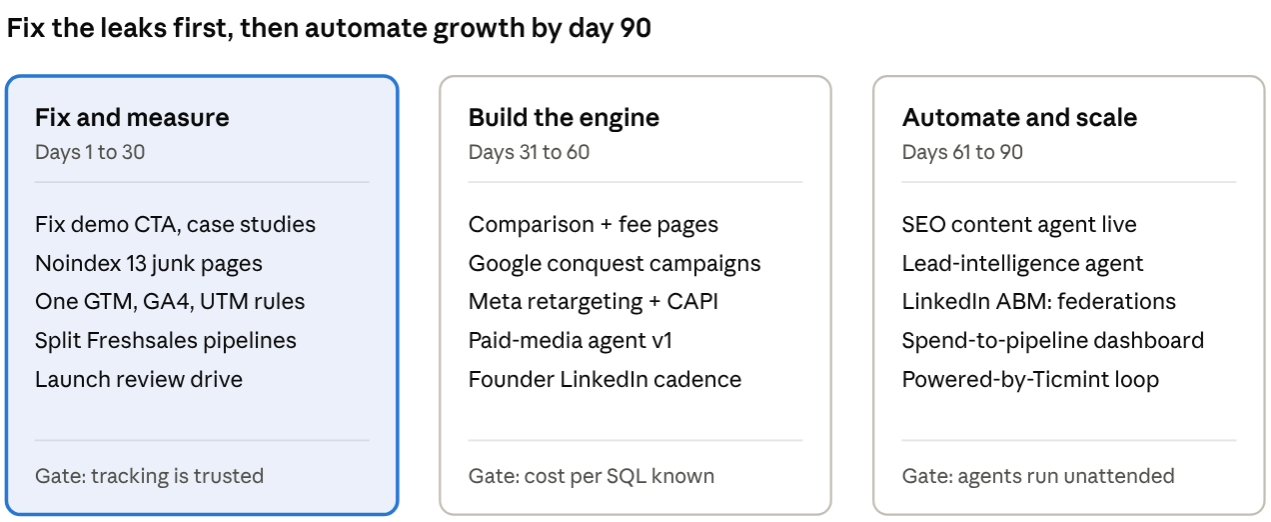

8. SWOT

Strengths	Weaknesses
Marquee sports proof (BAI India Open, BFI) and $41M+ processed	Positioning drift: NFT/blockchain story still live on YouTube and in 2023 press
ISO 27001 + SOC 2 — rare for a challenger	No review proof (Capterra 0, G2 7) and no attributed testimonials
Low-fee, white-label bundle with WhatsApp/email marketing and affiliates	Site hygiene: dead demo CTA, mislabelled case studies, draft pages indexed, duplicate GTM
DTCM permit content and tools — a real UAE niche moat	Content volume over intent; no comparison pages; cannibalised DTCM posts
Founder with a prior 10M-user SaaS (Foradian)	Thin social audience (IG 3.4K, X 641, YT 2K) and all paid ads paused since Aug 2026

Opportunities	Threats
Competitor-unhappy organisers (Eventbrite fee hikes, marketplace data lock-in) — the JD's lead-intelligence agent	Ticket Tailor's flat per-ticket fee beats 2% on mid/high-price tickets
Indian sports federations and leagues beyond badminton/basketball	BookMyShow/District and Platinumlist own consumer demand in India/UAE
"Powered by Ticmint" viral loop on every white-label event page	AI-generated listicles risk Google helpful-content demotion
AI answer-engine visibility via reviews and comparison pages	Low switching friction across self-serve ticketing tools
Productising Ticmint's own growth agents as features for organisers (the JD's "growth engine that becomes a product")	Spreading across four markets with one small team

9. 30-60-90 day growth plan

Month one fixes leaks and makes data trustworthy, because every agent in the JD is only as good as the tracking it reads. Agents come in month two and three, on top of clean GA4 and Freshsales data.

Proposed 90-day growth roadmap · 3 phases, each with a gate

Each phase ends with a gate: don't scale spend until tracking is trusted, and don't hand decisions to an agent until cost per SQL is known.

The three agents from the JD — how I'd build them

Agent	Inputs	Decisions / actions	Stack	First version (MVP)
Performance Marketing Agent	Meta, Google, LinkedIn Ads APIs; GA4; Freshsales SQLs	Pause ads above target cost per SQL, shift budget to winners, draft new copy variants for approval	Claude Code + custom MCP servers per ad platform; n8n for schedules	Daily read-only report + recommended changes in Slack, then one-click apply, then auto-apply within budget guardrails
SEO Content Agent	GSC queries, ranking data, competitor SERPs, existing post sitemap	Find gaps and cannibalisation, write briefs, draft posts, publish to WordPress as drafts	Claude + WordPress REST API + GSC API	Weekly brief + draft for one comparison page; human edit before publish
